

NEED FEED

HOMEPAGE LIST

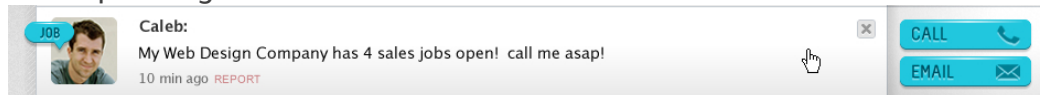

- Displays posts from 5 categories and “ALL” is the default category (The red Prayer tab gets its own separate page due to the larger amount of posts it will receive)

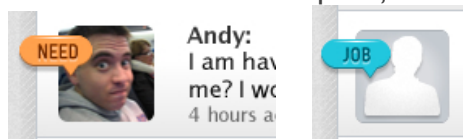

- Clicking on a colored filter tab filters the list to a single category
- Clicking the “All” category brings in all feeds together sorted as the time they were posted

- The numbers on the colored tabs represent the amount of posts in that category that have not yet been viewed/loaded
- Each post has a colored label, and colored buttons that match the corresponding tab

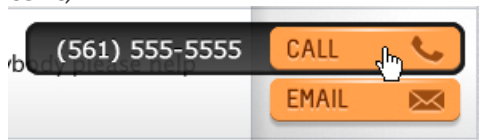

- Each post also displays the users profile picture, First Name, Time Stamp, and “REPORT” (there is a default profile picture for those who don’t have a picture yet). Reporting a post displays in the admin settings where the admin can delete the post, or ban the user

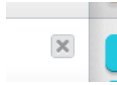

- Mousing over each post enables a style that has darker text styles and buttons that are fully visible (posts in the off state appear transparent)
- Posts can also display photos. Clicking on the photo button brings up a lightbox with arrows to cycle through up to three upload photos

- Clicking on an action button slides out a phone number or email (plain text)

- Users get to choose whether to have phone or email as their contact method (or both), and can choose a preferred contact method (buttons are sorted by preference)
- Users can delete their own posts by clicking on the X in the top right of each of their posts

- Scrolling down the page to the bottom brings you to a “Show more Results” button, that when clicked loads more results below

HOMEPAGE FILTER

- The filter has tabs for sorting, as well as the ability for a user to add a new post
- The first posting field is a drop down that asks for a category (“Need”, “Free”, “Job”, or “Prayer”)

- Since “Prayer” is separate, posting a new Prayer post will automatically show prayers list (instead of “All”)
- The next posting filter is “Message”. Each Message is allowed 200 characters (much like twitter). As the user types out the message, the character count dwindles

- The user can also post up to three photos by clicking the add photo button. A modal window will pop up and help the user upload up to 3 photos that fit inside file size and type (uploading photos resizes them to more web friendly versions. Once uploaded, the modal window closes and finally marks a number next to the photo button before posting button is clicked)

- Hitting Enter or clicking post finally adds the post to the list and reloads the page

SEARCH

- Users can search Names as well as post keywords

- Hitting Enter or clicking search reloads the page with search results (search results are styled as a regular posts)

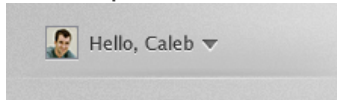

LOGO

- Clicking logo brings you to the homepage (“ALL” category)
- The church name next to logo can be changed by the admin as dynamic text
- Beta logo will be for first church project only. This will be a special admin field, or removed by developers.

USER DROP DOWN MENU

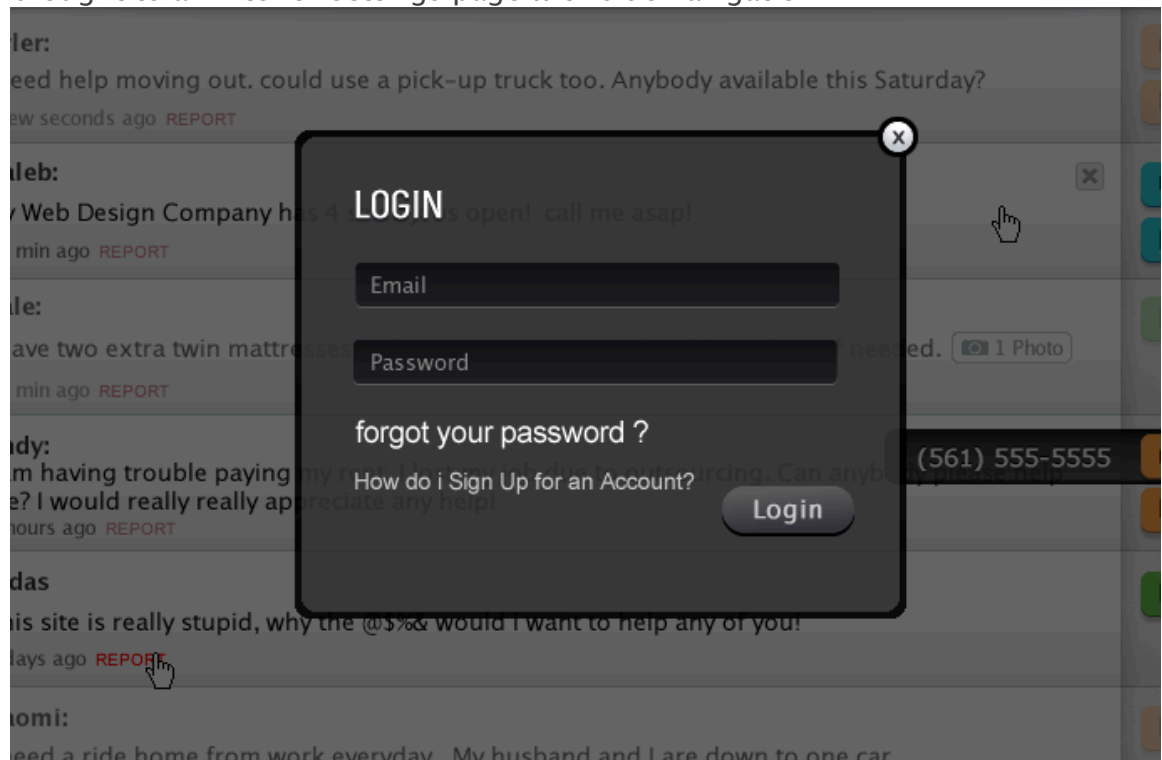

- Once logged in, a user Drop Down menu appears. This menu has a small thumbnail of the user profile followed by “Hello, Username” and a finally the dropdown arrow

- When a user is not logged in, The menu reads “Log In Here”
- Logging in automatically “Remembers” the user in further use

USER SETTINGS

- Once a user is logged in (via lightbox style modal window), they are brought to an interior settings page with side navigation

- Users can change password, update their profile photo, choose their contact preferences, view their posts, grab RSS codes from all 5 feeds (all counts as a feed), and change their password

My Account

- My Account Settings
- Password
- Help

Account Settings

* Email Address:

* First Name:

Phone #: (optional way to contact)

* Contact me by: phone ☒ email ☒

Profile Picture: none ☐

Maximum size 700k, jpg, gif, png

- Resetting password is simple and doesn't require a notification email. Once new password is set, the page reloads and a confirmation message

Password

Password:

.....

- After uploading a photo (must meet the size and file type requirements), the user can crop out a constrained ratio sized thumbnail

ADMIN SETTINGS

- The admin has the ability to view/monitor current amount of posts, change the church name, set the post expiration dates (can save valuable storage space), add/remove users, check for updates, and view a help page
- Updates and Help page are iframes that point to the main NEEDFEED.org pages (allowing for easy message and updates without require an overall software update)
- (The admin can also post and have all the same settings and abilities as a normal user)

Administrator Menu

- Basic Settings

Save My Admin Settings

MEMBERSHIP

- Membership is only available to new church members
- To add a user, the admin must create the username and password (not automatically generated)
- There can be up to 5 multiple admin accounts, only able created when software is being set up for the first time

INSTALLATION

- The complete software package needs to be available as a download .pdf.
- The software package can be downloaded from the main .org website (not included in this scope)
- The software needs to be written in an easy to install, easy to manage, flexible language
- The software will site on a churches website server and will be installed by the churches webmaster
- Keeping this as simple as possible is the key, and I am open to suggestions to make this part smoother
- A main purpose of this software is to make it free for everyone, and easy to use
- This also needs to be installed in a way that blocks Google search indexing (keeping names and needs private)

COLATERALS

- All finished pages designs will be supplied. From the favicon to the apple touch, all graphics will be provided. Any other necessary graphics can

also be requested and supplied in a timely manor. Page Designs are designed in a Fireworks .png, but can also be exported as a .psd
